Nowadays we tend to buy lot of things, which we could possible make them in home. Even the smaller things that we buy outside, has consumed lot of energy, time and waste. So the idea is to promote home remedies to make our own household products. My project is to encourage people to make their own washing detergent with a simple measuring tool. It consists of three different scoop with different measurements. Along with scoops, it also has a container for mixing the soda to get fine homemade detergent.
