YOURTOOTHBRUSH - cyclic toothbrush

lydminus@gmail.com

Yongdong Long

The fact is that we change our toothbrush every 1 to 3 months, while mostly of those thrown away plastic toothbrushes ended up in landfills, and some even floating in the ocean, eaten by sea animals, which cause horrible results. Meanwhile, normal toothbrush also contains materials such as silicon rubber and metal chips that increase the difficulty of recycle process.

Hence, I come up with this new design with following features, long-lasting and recyclable aluminium body, replaceable bristle, standing feature for convenient use while maintaining a simple stylish looking, to hopefully encourage people to switch to a cyclic lifestyle and having more value on their daily-using products.

Hope you will never need to change toothbrush ever again, or throw them away.
