Tons of food are thrown into the trash every day, many of us are not aware that we can use them as fertilizers, and they just choose the easy way and throw them in the trash.

You can dispose of your coffee waste, which is the most useful fertilizer without composting, into the recycling garden.

The system inside, a natural fertilizer environment has been created for your flower. The purpose of the project is a natural fertilizer that you can use for coffee and tea waste. We could use it in public areas in cafes, thus creating a natural fertilizer garden that encourages people to recycle.

You don't need to take any extra action, just take your fertilizer out of the box and use your fertilizer directly for your own garden. This project provides recycling and awareness.
