

## DUAL

The luminaire that optimises productivity and comfort in a small home office

Dual is a family of LED task/ambience luminaires designed for those who want to work effectively in the comfort of their home. In compact homes where one's bedroom serves both as a workspace and a space for comfort, different lighting is needed to optimise one's productivity and sense of relaxation: cool and bright task light boosts productivity, while warm and dim ambient light maximises comfort.

Fusing form and function, Dual allows users to adjust the brightness and colour temperature of their lighting with one simple and intuitive joystick control to create the optimal environment with high-quality task or ambient lighting. The swivel and rotary joints allow for smooth adjustment in lighting direction, while the function-driven perforated aesthetics provides excellent heat dissipation qualities to preserve the life of the LEDs.
