

VILO
Uplighter with an adjustable shade

Vilo is an uplighter that enables a variety of light environments. The adjustable shade is not only designed to reflect light in different directions but also to create ambience in the room. The geometric shapes are iconic and simple, yet expressive and playful. Additionally, Vilo has an automatic dim down function to prepare the body and mind for rest and sleep. In 30 minutes – the time it takes to get dark when the sun has set – the light gradually turns off.

The matte white side of the shade reflects the natural colour of the light. The red side reduces blue light to create a calming lighting mood at home. The shade can easily be rotated or flipped. This changes the light mood or reflects the light in the desired direction, creating a new visual expression each time. Vilo comes in two sizes. One large floor model to set the light mood in any room and a smaller model for side tables.
