TEDA

A COLLECTION

What is it that makes a design collection coherent? It is through extensive research that this project has explored this question, resulting in the TEDA-collection. TEDA consists of a lighting system which alongside with additional objects creates a collection.

The main element of the collection is the lighting puck that can be fitted into any of the four different frames in the system. The puck can be inserted in either direction, providing direct or ambient light. The aesthetic appearance is minimal, subtle, yet with a hint of playfulness.

Flexibility is the main element of this project. Along with being able to be inserted in either direction, the puck is fitted with a battery, creating the opportunity of having it portable, making TEDA a lighting system that provides possibilities to be applied in a broad spectrum of indoor environments or contexts to create interesting lighting scenarios.
