

Milo

A teaching mirror

*Johan Elmdahl, Nicole Steiner,
Melanie Walder, Sabrina Zetzsche*

With the help of a motion tracking sensor *Milo* serves as a personal coach, which is able to help people acquire new skills or boost existing ones. The multifunctional mirror responds to the user's movements and provides immediate feedback which is adapted to the individual's abilities.

In the future *Milo* could assist people in developing further skills connected to motion like dancing, handcrafting or playing instruments.
