

LIGHT ON HEATSINKS

Victoria Sevilla

more about the project

This project showcases the transformation of two pieces from the same discarded mechanism into two lamps with distinct characters.

"Resonance" explores the interplay between the heatsink, the light it captures, and the sound it emits when interacted with. The reverberation of sound and light induces a meditative state.

"CIY (Curate it Yourself) lamp" repurposes the heatsink's support as a lamp base. Its particular geometry invites user participation in the curating process, allowing the use of any thin sheet as a lampshade.

Feel free to play with them!
